# 1 Introduction

The PowerPoint (.pptx) Extensions to the Office Open XML File Format specifies elements and attributes that extend the XML vocabulary for representing PresentationML documents described in the [\[ISO/IEC29500-1:2016\]](#) specification. The new elements and attributes are presented using the extensibility mechanisms provided by the [\[ISO/IEC29500-1:2016\]](#) specification.

Sections 1.7 and 2 of this specification are normative. All other sections and examples in this specification are informative.

## 1.1 Glossary

This document uses the following terms:

**comment:** An annotation that is associated with a cell, text, or other object to provide context-specific information or reviewer feedback.

**Coordinated Universal Time (UTC):** A high-precision atomic time standard that approximately tracks Universal Time (UT). It is the basis for legal, civil time all over the Earth. Time zones around the world are expressed as positive and negative offsets from UTC. In this role, it is also referred to as Zulu time (Z) and Greenwich Mean Time (GMT). In these specifications, all references to UTC refer to the time at UTC-0 (or GMT).

**globally unique identifier (GUID):** A term used interchangeably with universally unique identifier (UUID) in Microsoft protocol technical documents (TDs). Interchanging the usage of these terms does not imply or require a specific algorithm or mechanism to generate the value. Specifically, the use of this term does not imply or require that the algorithms described in [\[RFC4122\]](#) or [\[C706\]](#) must be used for generating the **GUID**. See also universally unique identifier (UUID).

**ink:** A process of entering text in handwritten form. Instead of converting handwritten text to typed text, ink is converted to an object and displayed exactly as it was written.

**presentation:** A collection of slides that are intended to be viewed by an audience.

**presentation slide:** A slide that contains the content that can be displayed during a slide show. A presentation slide can derive formatting and content from a main master slide or a title master slide.

**shape:** A collection of qualifiers, such as names, and quantifiers, such as coordinates, that is used to represent a geometric object. A shape can be contained in a document, file structure, run-time structure, or other medium.

**shape identifier:** An integer that corresponds to a shape object or an instantiation of a shape object.

**slide show:** A delivery of a sequence of presentation slides, typically to an audience.

**time node:** A record or parent node that stores the information that is necessary to cause a time- or action-based effect to occur. Each time node has a corresponding object to which an effect is applied. It can be used randomly, simultaneously, or sequentially, and it can be used to specify certain time-based effects between objects that are being animated. Effects include visual and media behaviors.

**Web Video Text Tracks Format (WebVTT):** A format for displaying timed text tracks (such as subtitles or captions) using the <track> element. The primary purpose of WebVTT files is to add text overlays to a <video>. WebVTT is a text based format, which must be encoded using UTF-8.

**XML:** The Extensible Markup Language, as described in [\[XML1.0\]](#).

**Zoom:** An object that links to a slide or section that shows a transition when navigating to the slide or section.

**MAY, SHOULD, MUST, SHOULD NOT, MUST NOT:** These terms (in all caps) are used as defined in [\[RFC2119\]](#). All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

## 1.3 Overview

This structure provides an extended **XML** vocabulary for a PresentationML document. The extended elements and attributes allow the format to indicate further information about a document, or content and formatting of parts of the document beyond the elements and attributes described in [\[ISO/IEC29500-1:2016\]](#). Because these elements and attributes are meant as extensions, their intent and usage varies.

The extensions support new functionality involving slide transitions (section [2.2.1](#)), slide animations (section [2.2.2](#)), content parts (section [2.2.3](#)), media (section [2.2.4](#)), sections (section [2.2.5](#)), **slide show** (section [2.2.6](#)), images (section [2.2.7](#)), math (section [2.2.8](#)), change tracking (section [2.2.9](#)), comments (section [2.2.10](#)), guides (section [2.2.11](#)), and charts (section [2.2.12](#)).

The extensions in this format are integrated into [\[ISO/IEC29500-1:2016\]](#) by means of the Markup Compatibility and Extensibility features as described in [\[ISO/IEC29500-3:2015\]](#). Specifically, the **Ignorable** attribute ([\[ISO/IEC29500-3:2015\]](#) section 10.1.1), the **AlternateContent** element ([\[ISO/IEC29500-3:2015\]](#) section 10.2.1), and application-defined extension elements are used to maintain compatibility with [\[ISO/IEC29500-1:2016\]](#) implementations when integrating the extensions from this format. Using these extensions as described in this document will result in a PresentationML document that is conformant to [\[ISO/IEC29500-1:2016\]](#).

## 1.4 Relationship to Protocols and Other Structures

The structures described in this document are incorporated into PresentationML documents as described in [\[ISO/IEC29500-1:2016\]](#) using the Markup Compatibility and Extensibility features as described in [\[ISO/IEC29500-3:2015\]](#). The global elements described in this format appear as optional child elements of certain elements described in [\[ISO/IEC29500-1:2016\]](#) as described in section [2.3](#). The global attributes described in this format appear as optional attributes on certain elements described in [\[ISO/IEC29500-1:2016\]](#) as described in section [2.4](#). Some of the elements, attributes, simple types and complex types here also refer to complex or simple types described in [\[ISO/IEC29500-4:2016\]](#).

## 1.5 Applicability Statement

This document specifies a set of structures to extend the **XML** vocabulary of [\[ISO/IEC29500-1:2016\]](#) PresentationML documents. The extensions specified in this document allow for expressing additional document content and properties, and are not applicable as a stand-alone file format. Each structure specified in this document is integrated with [\[ISO/IEC29500-1:2016\]](#) PresentationML documents in a particular way, as specified in the description of that structure. All structures are integrated into PresentationML documents in such a way that maintains compatibility with [\[ISO/IEC29500-1:2016\]](#) implementations.

The extensions specified in this document do not require any other extensions to be used, and do not prohibit any other extensions from being used in the same PresentationML document.

| Content types       | Any supported audio or video type. See <a href="#">[ISO/IEC29500-1:2016]</a> sections 15.2.2 and 15.2.17 for a list of possible content types. |
| Source relationship | <a href="http://schemas.microsoft.com/office/2007/relationships/media">http://schemas.microsoft.com/office/2007/relationships/media</a>        |

An instance of a Media part specifies the binary data of a media file containing audio information, video information, or both audio and video information.

A Media part MUST be the target of an explicit relationship from a Slide part ([ISO/IEC29500-1:2016] section 13.3.8), a Slide Layout part ([ISO/IEC29500-1:2016] section 13.3.9), or a Slide Master part ([ISO/IEC29500-1:2016] section 13.3.10).

A Media part is not stored as **XML**; instead, it involves a relationship target that is a media clip.

A Media part can be located within or external to the package containing the relationships part; as such, the value of the **TargetMode** attribute of the **Relationship** element ([\[ISO/IEC29500-2:2012\]](#) section 9.3.2) can be either "Internal" or "External".

A Media part MUST NOT have implicit or explicit relationships to other parts specified in [ISO/IEC29500-1:2016] or this document.

## 3 Structure Examples

The following sections provide examples of some of the extensions specified in this document. Some otherwise required markup has been elided and marked with "..." to focus the example on the particular elements being described.

### 3.1 Slide Transitions

The following shows an example of a **ripple** transition (section [2.3.1.24](#)):

```
<p:sld xmlns:a="http://schemas.openxmlformats.org/drawingml/2006/main"
xmlns:r="http://schemas.openxmlformats.org/officeDocument/2006/relationships"
xmlns:p="http://schemas.openxmlformats.org/presentationml/2006/main"
xmlns:p14="http://schemas.microsoft.com/office/powerpoint/2010/main"
xmlns:mc="http://schemas.openxmlformats.org/markup-compatibility/2006">

  <mc:AlternateContent>
    <mc:Choice Requires="p14">
      <p:transition spd="slow" p14:dur="1500">
        <p14:ripple dir="ld"/>
      </p:transition>
    </mc:Choice>
    <mc:Fallback>
      <p:transition spd="slow">
        <p:fade/>
      </p:transition>
    </mc:Fallback>
  </mc:AlternateContent>

...

</p:sld>
```

This example shows a **ripple** slide transition (section 2.3.1.24). The **p14:dur** (section [2.3.2.3](#)) attribute on the **p:transition** element ([\[ISO/IEC29500-1:2016\]](#) section 19.3.1.50) has a value of 1500 and indicates the transition runs for 1.5 seconds. The **dir** attribute on the **p14:ripple** element (section 2.3.1.24) has a value of "ld" and indicates the ripple will be to the left and down.

### 3.2 Media

The following shows an example of a **media** (section [2.3.1.18](#)) extension:

```

      <a:picLocks noChangeAspect="1"/>
    </p:cNvPicPr>
    <p:nvPr>
      <a:videoFile r:link="rId1"/>
      <p:extLst>
        <p:ext uri="{DAA4B4D4-6D71-4841-9C94-3DE7FCFB9230}">
          <p14:media

Together they indicate that the video has been trimmed, such that the first frame played is 18.3740515 seconds from the start of the video and the last frame played is 29.5967072 seconds from the end of the video. The **in** attribute of the **p14:fade** element has a value of 1000 and indicates the video will fade in for 1 second of playback. Finally, the **p14:bmk** element indicates a media bookmark. The **time** attribute has a value of 53703.3597 and indicates the bookmark location is 53.7033597 seconds from the start of the video. The bookmark can be used to easily jump to a particular point in the video or to trigger a separate animation.

```

First, the example shows a **p14:laserTraceLst** (section 2.3.1.17) element with two laser traces. The first **p14:tracePtLst** element indicates the first laser trace which includes three trace points. The first **p14:tracePt** element's **t** attribute has a value of 48796; its **x** attribute has a value of 6062662; and its **y** attribute has a value of 3259137. Together they indicate that the laser pointer first appears after 48.796 seconds at the location (6062662, 3259137). The second **p14:tracePt** element's **t** attribute has a value of 49796; its **x** attribute has a value of "6438900"; and its **y** attribute has a value of 3179762. Together they indicate that the laser pointer moves to the location (6438900, 3179762) after one additional second. The third **p14:tracePt** element's **t** attribute has a value of 50296; its **x** attribute has a value of zero; and its **y** value has a value of zero. Together, they indicate that the laser pointer moves to location (0, 0) after an additional 500 milliseconds. At this point, the laser trace ends and the laser pointer disappears. The second **p14:tracePtLst** element indicates the second laser trace, which includes two trace points. The first **p14:tracePt** element's **t** attribute has a value of 52000; its **x** attribute has a value of 1196975; and its **y** attribute has a value of 2982912. Together they indicate that the laser pointer reappears 1.704 seconds later at position (1196975, 2982912). The second **p14:tracePt** element's **t** attribute has a value of 55000; its **x** attribute has a value of zero; and its **y** attribute has a value of zero. Together they indicate that the laser pointer moves to location (0, 0) after an additional 3 seconds. At this point, the laser trace ends and the laser pointer again disappears.

Next, the example shows a **p14:showEvtLst** (section 2.3.1.26) with six events. The **p14:triggerEvt** element indicates the first event. Its **type** attribute has a value of "onClick"; its **time** attribute has a value of 6950; and its **objId** attribute has a value of 6. Together they indicate that the shape with the name "Rectangle 5" was clicked at 6.95 seconds. The **p14:playEvt** element indicates the second event. Its **time** attribute has a value of 12722 and its **objId** attribute has a value of 4. Together they indicate that the video with name "video1.wmv" began playing at 12.722 seconds. The **p14:pauseEvt** element indicates the third event. Its **time** attribute has a value of 38839 and its **objId** attribute has a value of 4. Together they indicate that the video with name "video1.wmv" was paused at 38.839 seconds. The **p14:seekEvt** element indicates the fourth event. Its **time** attribute has a value of 38839; its **objId** attribute has a value of 4; and its **seek** attribute has a value of 10379. Together they indicate that the video with name "video1.wmv" was sought to 10.379 seconds from the start of the video at 38.839 seconds. The **p14:resumeEvt** element indicates the fifth event. Its **time** attribute has a value of 38859 and its **objId** attribute has a value of 4. Together they indicate that the video with name "video1.wmv" resumed playing at 38.859 seconds. The **p14:stopEvt** element indicates the sixth event. Its **time** attribute has a value of 49628 and its **objId** attribute has a value of 4. Together they indicate that the video with name "video1.wmv" stopped playing at 49.628 seconds.

## 6 Appendix B: Product Behavior

The information in this specification is applicable to the following Microsoft products or supplemental software. References to product versions include updates to those products.

- Microsoft PowerPoint 2010
- Microsoft PowerPoint 2013
- Microsoft PowerPoint Online
- Microsoft PowerPoint 2016

Exceptions, if any, are noted in this section. If an update version, service pack or Knowledge Base (KB) number appears with a product name, the behavior changed in that update. The new behavior also applies to subsequent updates unless otherwise specified. If a product edition appears with the product version, behavior is different in that product edition.

Unless otherwise specified, any statement of optional behavior in this specification that is prescribed using the terms "SHOULD" or "SHOULD NOT" implies product behavior in accordance with the SHOULD or SHOULD NOT prescription. Unless otherwise specified, the term "MAY" implies that the product does not follow the prescription.

## 7 Change Tracking

This section identifies changes that were made to this document since the last release. Changes are classified as Major, Minor, or None.

The revision class **Major** means that the technical content in the document was significantly revised. Major changes affect protocol interoperability or implementation. Examples of major changes are:

- A document revision that incorporates changes to interoperability requirements.
- A document revision that captures changes to protocol functionality.

The revision class **Minor** means that the meaning of the technical content was clarified. Minor changes do not affect protocol interoperability or implementation. Examples of minor changes are updates to clarify ambiguity at the sentence, paragraph, or table level.

The revision class **None** means that no new technical changes were introduced. Minor editorial and formatting changes may have been made, but the relevant technical content is identical to the last released version.

The changes made to this document are listed in the following table. For more information, please contact [dochelp@microsoft.com](mailto:dochelp@microsoft.com).
